Pc monitoring app for android

Android has been around for more than a year, and at that moment the developers whiped some large apps. Whether you are a new Android owner or a pro looking for new tools, these 10 fantastic and free apps belong to your Arsenal.Photo of Lwallenstein. To jump immediately above the apps that are so common, universal, and well replicated on the iPhone or other mobile platforms that a user with a need probably we can do - Facebook, Yelp, Evernote, remembers milk and endless twitter clients, Widget and app. We also skipped on Google's ordered apps, like Google Voice, navigation and glasses, which are (or will) included the standard on new Android phones. Instead, we are aiming to shine a small light on apps that can easily offer excellent functionality for those who download them Searches, off from some comments and emails Andro-savvy.10. Layarin Some ways, this is a vote for the potential of layar as much as the practical application. Walking through your phone and see Wikipedia's subjects, apartments for sale and what Twitter users have delighted through your phone is a rather accurate thing, and potentially useful when you're looking for things to do in a new city. But as Layar continues to add new levels, and how the camera and mobile processing power continue to improve, Layar could become much more interesting than already. One thing worth remembering is that if you don't like the view of the 3D camera, or as the appearance of yourself while you use it, Layar can only show the points of interest on a Google type map. Anyway that you use it, it's an intriguing aspect to what is happening around the corner. FreeThe As Desside tariller at Android multi-tasking is that at times, some apps can become unexpectedly become magni of memory or bandwidth or bring the phone with them when they lock. Few apps provide a direct and easy "chit" option, however, and sometimes you can't get to the To close it. Enter taskiller, a free app murder utility that works from its standard icon, or as a series of numerous widgets you can add to the home screen to save the system with a single click. The free version serves advertisements and lacks some advanced features, but generally serves the needs of anyone who tires you to need to actually reset the phone just to clarify space for, know, phone calls and such. Note: This app must be used as more than a last resort than the regular maintenance tool, killing processes and Willy-Nilly apps can disable alarms, kill background synchronization and have other non-intentional consequences.5. Slidescreenyou uses your Android smartphone differently from your desktop computer. Don't work with files and shortcuts, so that check-in on data flows that interests you - E-mail, text messages, Facebook and Twitter, chats and the like. Slidescreen replaces, or simply increasing, if you wish, the main phone screen, creating line after the message line and feed. Slide the central information bar upwards and down to look more or less of your items, scroll right to dismiss items like beds and finish having all your data on your hand at once. Slidescreen also replaces the standard application tray, offering 8 slots to put your apps most frequently accessible and tuck up all the others in a rolling bridge below. It's a total makeover for your phone, in other words - one that could simply make you fall in love with the concept of mobile data. (Original post) Android: The default home screen in Android is fine and for the most functional. Slidescreen, atÃ ¢ â,¬ | Connect4. Shoperokay, at the beginning we were rather skeptical of the application of Google's Shopper, since it only seemed a mashup of his Google glasses and Google's smart-smart apps like Shopsavvy. Then we actually used the shopper, and we were amazed both from what is accurately considered both barcodes and simple hedging shots, and how much it worked very quickly. It turns out, according to a developer who appeared in this week in Google, shopper is actually loading the image data on Google servers as it captures and decodes the barcode on the phone. The speed for the speed sake is beautiful, of course, but it's nice enough not to have to stand in front of a display of a book for a whole two minutes, waving the phone around a group of books you are trying to do the competitive price. The buyer answers the question "I can buy this cheapest", and responds quickly.Android: Google has already got got glasses for visual search and the Google Shopper's mobile site can be run ... Astro File ManagerThis is one of those app app Hope has a bit of attention, if only to be purchased from Google or otherwise integrated into the base phone software. Astro File Manager does a great job to allow you to navigate the files on the SD card and the internal memory accessible, surely, but it also has your own integrated killer task, backing up applications, can send files as e-mail attachments (not everything Easy or intuitive from the mail client, for some reason) and much more. It is the Leatherman of Android utilities and a must-have on any serious Geek phone. To each of them, obviously, but we would like to hear which Android apps consider crucial to your phone in the comments. We tend to free, but if you have found a cheap app that is worth a few dollars, our loving Android readers and developers, they would probably be happy for the referral. Joe Hindy / Android Authority of the most common things people must do is transfer files from their mobile device or tablet to their desktop. Sometimes it's a picture, sometimes it's a song, and many other times is a kind of document, presentation or other file that needs transferred. There are actually a lot of ways to transfer files from Android to PC (and back back) and we will take a look at them here. I would also like to show honor to synchronization-fork (Google Play Link). It's a bit more power that is easy to use than regularly the user friendly, but it worked perfectly in our test.Airrroid is one of the most popular apps to transfer files from Android to PC. They can also do other things. Features include sending and receiving SMS / MMS from the PC, consult device notifications and much more. You can also find a lost phone, check the camera and use app. You will also be able to transfer files to your computer from your phone. You have the basic stuff for free. You should subscribe to the service to get everything. Pushbullet works the same way in terms of file transfer to PC from your Android device, even if it costs a little more. You can go with one of these options. They are the two most popular options. Price: free / varies from AppCloud Storage is an excellent method to transfer files from Android to PC and go back. There are a variety of services to choose from, including Dropbox, Google Drive, OneDrive, Box.com and others. Files transfer is quite easy. Upload the cloud storage file on a device. Then download it on another device. Most cloud storage apps have their own dedicated apps and makes the process easier. We have our best list of cloud storage apps linked to the upper part of this article. Joe Hindy / Android AutorleFeem is a simple app that is part of one thing. Transfers things from the devices connected to the same WiFi network. That includes mobile phones, tablets, computers, laptops or anything else. Each device simply download FEEM and executes it. From there, you can transfer everything you want and from those devices. WiFi is not necessary to be connected to the actual Internet. A local network is everything you really need. It is simple, effective, economical and the design of the material looks nice. Conditionit is another app in this same style that is good. The synchronization of the resilio (previously BitTorrent Sync) is a kind of wildcard. It works a lot like the cloud store. However, the cloud storage server is your desktop or laptop. You can synchronize the most data as you prefer, transfer files back and forth to Volonant and much more. It should also support Mac, Linux and Windows. It is certainly among the safest options. Your stuff is never on a cloud server. It's just your phone and your device talk to each other. The app is free for limited use and you can All the features for a single payment a little expensive, albeit if you want. This can easily replace the cloud storage wholly if you want it. Xender is one of the most popular apps in this space. Allows you to connect the phone to another device and transfer wifi. Works with others Or iOS phones, Mac, PC and even Tizen. The app does its job as intended most of the time and worked well in our tests. However, this is one of those apps that works perfectly or doesn't work at all. It also has some other features, such as the possibility of converting video to audio and apparently you can use it to download Facebook, WhatsApp and Instagram video. Another strong (even less popular) competitor here is Feem (Play Store Link). If the Aren apps are your agreement, there are still some other ways to transfer files from your PC to Android and vice versa. Use Bluetooth - If your laptop has a Bluetooth module or if you have a Bluetooth dongle for the desktop or laptop, you can pair the device with the computer using Bluetooth and send files in this way. Transfer speeds are very slow, then use this method only for smaller files. USB on-the-go cables Ã ¢ â,¬ "USB OTG cables allow you to connect your device to USB devices like external hard drives or flash units. You use the cable to transfer documents to your flash drive or hard disk Exterior or vice versa. They are relatively inexpensive. Share with the e-mail - this works only with small files like photos or documents, but you can send most of the file types by e-mail. Most of the e -Mail has a limit of about 25 MB for attachments. Share to chat Ã ¢ â,¬ "works for a number of file types, especially if you use something like discord, loosening or skype. You send you the file in a chat on a device and retrieve it on another. This should work for smaller files like photos, documents or similar things. Skype and the game have support for things like PDF files, archived files (zipped), and other types of documents. Use your data cable / load Ã ¢ â,¬ "this is quite obvious. Just connect the phone to your computer using the USB cable supplied with the charger. This is the most common and reliable method to transfer files to PC from Android devices. Your micro card micro SD devices with Micro SD card support can transfer files very similar to Flash Units. You use a file manager application to move files to the SD card, turn it off from the phone (after turning it off , of course), then use an adapter to insert it in your card reader on your laptop or a different adapter to connect it to your computer's USB t-rate. The function of Share nearby Android Ã ¢ â,¬ "The nearby utility of shares Android doesn't work much like Apple Airdrop, but for Android. You can quickly share small or large files with devices right next to you. This only works by an Android device to another Android device, but it's still a method to move files around.
