Vivek replied Oct 25, 2012 01:44 pm In Inventor Tweep Option is used for explosion. But this will be available only in a presentation file (IPN). Just as you create a new part or an assembly, you will have another option to open a presentation file (IPN). Within this presentation file you need to navigate for the assembly file as you view a part model in assembly. When you try to open an assembly in a presentation, you will get a small window where you can select the associated check box. If you select this option, you will automatically update your IPN file whenever you make changes to the group. In that presentation you will have the TWEEK option. You can use views exploded on Balloon an assembly using the numbers of items found in a list of parts or in a material material. You create exploded views using a combination of assembly files (.m), presentation (.ipn) and drawing (.idw, .dwg). A group view is created in the presentation file and the components are repositioned in the view. The design views are then generated by the presentation file. To use an assembly to create an exploded view, see: About presentations, exploded views and publications and publishing and subtopic in that section.
