Apple pie apk prank download

Now one day there is an Apk file that goes viral on WhatsApp and people are sharing it without any knowledge. Maybe some of them know something or not. If you haven't received that app yet, here is its name "Apple Pie". This is an application that can be installed on your Android phones. This application is quite dangerous for you and can seriously damage. Therefore, you do not need to use it or install it on your phone. The reason to share this article here is that I just want you to feel about its dangerous consequences. When for the first time I heard about this application then tried to search on Google. But unfortunately, I didn't find the Apk but I found a video where an Indian boy shared his experience on the app. Before entering into more details of Apple Pie App I just want to ask all of you who please share this information with all your friends. Because it is a serious problem that can damage your character as well as your reputation. About Apple Pie Apple Pie Apk is an Android package that you can install on Android mobile devices. This application has become viral through WhatsApp. Initially, it becomes viral in India and some of that country shared its bitter experience in its YouTube video. He showed the whole process practically, and the consequences were so terrifying. You can go to a coma after watching the results on that video. How did it happen? The guy who crossed this Apple Pie App shared his story in detail that how and when this happened to him. So one day he received an Apk file on his WhatsApp account that was sent by one of his friends. Although, he didn't open that file and first tried to know about it from the friend who forwards it to him. But unfortunately, his friend lied to him and told him that it was a kind of offering 500 MB of internet data to use it. So, in curiosity, that guy installed it on his phone and opened that apple appleapp immediately after installation in seconds. When he opened it, he got an option to continue on Screen then clicked on that button continue. But she just got an endless porn voice on her phone. Not only that, but also, he couldn't stop that voice like that, he just turned off his cell phone. Then he went to a private place then deleted that Apple Pie App as well as its Apk from the phone memory. Do I have to download? I know we all love to look at such content, but of course in private. Because sometimes such content can be so much information, we also like it. But this does not mean that someone is using his phone while sitting at home with the whole family then suddenly face such an accident. It will be some kind of embarrassing and embarrassing situation for all of us because it's private. Therefore, I am not recommending this application for anyone nor recommend you to make such a joke. Because it's not a joke, you're disrespectful, and you put someone in an awkward situation. It's a kind of unethical and inappropriate app that's why I don't share it here with you. The reason to share this post is to create awareness among the masses. This type of Apk file can be more devastating for your Android phones and for your personal life. There is a new type of message that is becoming viral on WhatsApp, it is an APK file of an app, which is called Apple Pie. Last night, my friend sent me to learn more about it and worried if it is a trojan app, and, WhatsApp data can be leaked using this application? Let's find out more about this article. The app may not steal your WhatsApp or your personal data from your mobile phone, but it is still a dangerous app. Apple Pie APK is more than a joke app that changes some things on your smartphone to embarrass you if you are in a public place.Does Apple Pie work? When you touch the Apple Pie APK in the message in the WhatsApp, it will ask you to bejust like any other App, but before you do that your Android system will ask or permission to install the APK file from unknown sources. This is your first notice that you should not install all APK files required by third-party sources other than the Play Store itself. But, many people are familiar with installing APK files on their mobile phones (which is also known as sideloading,) it is more likely that you will agree to install the app file just out of curiosity. Once you do this, and install the app, at the opening of the app you will see the photo of Steve Jobs, and a button in the upper left corner, which says continue. When you touch the button continue you will start to hear in the voice of a, which is quite uncomfortable sound, especially when you do not have headphones and you are in a public area. Because you can't turn off the sound simply by switching off the screen, or by touching the back button to exit the app. The only way to close the sound is, go to the recent app and close the Apple Pie app, or, put the headphones. But, in a panic like this, only some people would be able to do it, which means embarrassment guaranteed for the rest of the people. If by chance, if you can turn off the sound, the embarrassment didn't go completely. Since the application also changes the lock screen and wallpaper of your smartphone with an inappropriate photo. So you'll have to make sure that you don't access the phone in front of someone else because I can feel the embarrassment. In addition, if you happen to get a call from anyone the sound will start again since the application also changes phone ringtones to uncomfortable audio (now do not ask what it means to perform here.) even if you uninstall the app from App, you will have to manually change the wallpaper ok on the homepage as a screen block, and also ringtone. How to keep safe from such applications? The best way tofrom this application is to ignore such messages and anddownload them first. If it is downloaded, make sure you do not install it on your phone. Because while it's just a joke app to make you feel embarrassed. The same method can be used to do even more damage, because if the application has managed to get permission to send SMS, your OTP is not safe, and if it gets permission to access contacts and media files, then they too can be sent to a remote server. And it may have strengthened the security and its operating system, but it cannot do much if you yourself fall Prey to such things. Another thing you can do is do a Google search on the message you receive. Also, please share this article with your friends to save them from embarrassment, embarrassment.
