Try it today!Convert PDF to editable Word documentsCombine multiple PDFs into one documentTransform JPG, PNG, BMP, GIF and TIFF images to PDFCreate your signature, signature signature pDF and get people to signAdd text, shapes, images and annotations to your PDFReduce the size of your PDF without losing quality Smallpdf is the first and only PDF software you'll love. We have all the tools you need to start, manage and finish your work with digital documents. You do a lot more than just look at PDFs. Highlight and add text, images, shapes and annotations to your documents. You can connect to 20 other tools to further improve your files. Fill out forms, sign contracts and sign contracts and close agreements in a few simple steps. You can also request electronic signatures and monitor your document at any time. File too big? Squeeze it. Do you need a specific format? Convert it. Are things getting chaotic? Merge and split files, or remove excess pages. Smallpdf has everything. No more work on more apps! Save time by storing, managing and sharing files across devices directly from our web platform. Create PDF scans, organize documents, and share files from all your connected devices with the Smallpdf? Over a billion users have used our service to simplify their work with digital documents. It is one of the most popular PDF software on the main B2B cataloging platforms: Capterra, G2 and TrustPilot.Unlock bonus features with Smallpdf Chrome Extension, Google Workspace and Dropbox App, all free to use.Get all the help you need with our 24-hour customer service.We use 256-bit TLS encryption for the secure transfer of information Your security is our priority. Smallpdf complies with ISO 27 001, GDPR and CCPA standards.Start your 7-day free trial and get unlimited access to all Smallpdf tools to convert, compress, sign and more. Critical reviews Corey 1.0 out of 5 starsI'm not very happy with the result of taking these pills.Reviewed in the United States on April 25, 2020I probably would have given these pills two stars, but the last pill messed me up. I've been taking 60 mg of Adderall a day for the last three years, they work perfectly for me, but I wanted to cut back on the mg I've been taking. I don't take the Adderall for a ride, but every time I try to cut it or it's a day or two without them, I crash hard. So I was looking for a supplement that wasn't just caffeine or something that made me sick. I read the reviews before I bought them, and the only bad things I noticed were the lack of pills, and the worst thing was the uncontrollable vomiting. I read it more 'cause I didn't want to get sick, but I saw some people say they drank alcohol when they were taking them and they think that's why they took them. with uncontrollable vomiting. I've been sober for three years, so I shouldn't get sick, I figured.No! The last pill I took was the morning after breakfast. About 45 minutes later, I had to run into the bathroom. My stomach violently. the next day I also vomited, and I had stomachache all day even if I had barely eaten that day. the second day after taking the last pill I didn't feel bad, but still I didn't feel bad, but still I didn't feel bad, but still I didn't feel bad. the mood to feel like the exorcist girl, do it. I'll never buy these pills again. The App library is a new way to organize your iPhone apps, introduced in ios 14. to find it, just scroll to the last page right of your iPhone apps, introduced in ios 14. to find it, just scroll to the last page right of your iPhone apps, introduced in ios 14. to find it, just scroll to the last page right of your iPhone apps, introduced in ios 14. to find it, just scroll to the last page right of your iPhone apps, introduced in ios 14. to find it, just scroll to the last page right of your iPhone apps, introduced in ios 14. to find it, just scroll to the last page right of your iPhone apps, introduced in ios 14. to find it, just scroll to the last page right of your iPhone apps, introduced in ios 14. to find it, just scroll to the last page right of your iPhone apps, introduced in ios 14. to find it, just scroll to the last page right of your iPhone apps, introduced in ios 14. to find it, just scroll to the last page right of your iPhone apps, introduced in ios 14. to find it, just scroll to the last page right of your iPhone apps, introduced in ios 14. to find it, just scroll to the last page right of your iPhone apps, introduced in ios 14. to find it, just scroll to the last page right of your iPhone apps, introduced in ios 14. to find it, just scroll to the last page right of your iPhone apps, introduced in ios 14. to find it, just scroll to the last page right of your iPhone apps, introduced in ios 14. to find it, just scroll to the last page right of your iPhone apps, introduced in ios 14. to find it, just scroll to the last page right of your iPhone apps, introduced in ios 14. to find it, just scroll to the last page right of your iPhone apps, introduced in ios 14. to find it, just scroll to the last page right of your iPhone apps, introduced in ios 14. to find it, just scroll to the last page right of your iPhone apps, introduced in ios 14. to find it, just scroll to the last page right of your iPhone apps, introduced in i you have: "You can see a folder for games, another for shopping and another for ordering food, for example. You cannot rename folders on this screen, as well as use them to edit the home screen. Here's how to use the app library on your iPhone. how to use the app library on an iPhone to find your apps are a couple of ways to open apps from the app library. Tap an app you see in a folder. the app library orders all apps in that category. you will probably see that some app icons are of regular size, while others are smaller. Tap a normal size app to open it immediately, or tap the smaller icons to open and browse the entire folder. Search all your apps. Tap the search box at the top of the app library screen to search for the app library screen to search all your apps. You want to start. to see all of your apps. Tap the search bar to view a list of all apps on your iPhone. dave Johnson/Business insider how to use the app library is that it allows you to hide applications from the home screen. A whether you want to hide rarely used applications, or are looking for a minimalist home screen with just a handful of the most essential applications, you can ban any unwanted app for the app library. This is a practical way to simplify your iPhone without actually completely eliminating apps. Â 1. in the home screen, tap and hold the app icon you want to hide until the pop-up menu appears.2. tap "Remove app". Athe pop-up menu to choose to remove the app. Dave Johnson/Business Insider 3. In the pop-up window, tap "Move to App Library, just like before. If you want to launch the app, you must now find it in the App Library. A new option in iOS 14 14 Hide an app instead of deleting it when you choose to remove it. Dave Johnson/Business Insider How to Restore an app removed from the Start Screen. You can do it with automatic folders, or using the search bar.3. Tap and hold the icon of the app until the pop-up menu appears.4. Tap «Add to the initial Scheme.» If you have hidden an app from the Start Screen, you can restore it by using the app Library. Dave Johnson/Business Insider Tech Reference: You are ready to leave your iPhone for greener pastures - in particular, the bright green hue of Google's Android ecosystem. It's an important move, of course, but it doesn't have to be discouraging. Beyond the surface-level differences, Android device without losing anything significant (including your mental health). Make your way through this easy to follow guide and you will be happily set up in your new high-tech house in no time. ToolsFirst thing: Some Android devices, such as Samsung Galaxy phones and possibly even physical cables to move a pile of data from your iPhone to your new Android device at a single stroke. If your Android phone offers such a service, it is a great starting point. Of course, these all-in-one methods are not available for all phones and do not always work perfectly or in all areas relevant to your needs. Later, we will enter the details step by step as you can move by yourself every important data category, piece by piece, without getting migraine. Calendar, contacts and photos will start with a simple three for a special one. Believe it or not, the main categories of calendar, contacts and photos are among the easiest things to migrate from iOS to Android. All you have to do is install the Google Drive app on your iPhone, then log in to the app using your main Google account. (If you don't have a Google account yet, the app will give you the chance to create one.) On your iPhone, open the Drive app menu, select "Settings" and then "Backup." If you want to move to some areas, but not on all, you can touch the area you want to manage individually. If you want to move them all at once, just tap the blue button "Start Backup" to allow the app to manage everything together. JR Raphael / IDG Google Drive for iOS offers a simple way to move your calendar data, contacts and photos to Android. This process may require aâe burn through a fair amount of data, so you probably want to save it for a period when your phone can be connected, connected to a Wi-Fi network, and not immediately needed for anything else. That said, you can always pause and start things again later, so don't worry too much about timing. All done? Excellent: Now just sign in to your new Android phone with the same Google account. You can find calendar data in the Google Calendar app, contact data in the Google Contacts app, and all photos and videos in the Google Photos app. (Depending on your device, some or all apps may be pre-installed by default; otherwise, you can simply download and install them from the Google Photos app. (Depending on your device, some or all apps may be pre-installed by default; otherwise, you can simply download and install them from the Google Photos app. (Depending on your device, some or all apps may be pre-installed by default; otherwise, you can simply download and install them from the Google Photos app. (Depending on your device, some or all apps may be pre-installed by default; otherwise, you can simply download and install them from the Google Photos app. (Depending on your device, some or all apps may be pre-installed by default; otherwise, you can simply download and install them from the Google Photos app. (Depending on your device, some or all apps may be pre-installed by default; otherwise, you can simply download and install them from the Google Photos app. (Depending on your device, some or all apps may be pre-installed by default; otherwise, you can simply download and install them from the Google Photos app. (Depending on your device, some or all apps may be pre-installed by default; otherwise, you can simply download and install them from the Google Photos app.) of this process. In this scenario, you'll need to add your Exchange account to the Gmail app on your Android phone (see next section for more details), and your contacts and calendar information will range from "ridiculously simple" to "relatively smooth", depending on the configuration specifications. Choose your adventure: If you're using Gmail: There's nothing you can do; make sure you sign in to your Android Gmail app and wait for you. If you have more than one Gmail address and you want to be able to access them all on your phone, open the Gmail app settings and search for the "Add Account" option, then follow the steps to add any additional Google accounts into the mix. If you are using a webmail provider such as Outlook.com, Hotmail or Yahoo: Add your account to the Gmail app on your new phone, using the same steps. described above, but selecting the appropriate options for connecting different types of email accounts to your Android device. If you're using Apple Mail: Once again, just add your account to the Gmail app on your Android phone. It's a little bit more to it this time, though: After selecting "Add Account" in the app settings, tap the line labeled "Other", type your email address, and then select "Personal (IMAP)." When prompted, enter the various taxes. mail server settings provided on Apple's support site. If you use Exchange: Same basic offer, but select the "Exchange and Office 365" option in the "Add Account" section of the Gmail app settings. The app will guide you through the rest of the installation process. Of course, you can also choose to use the official Microsoft Outlook Android app if you are used to that program and want an experience option to consider: If you use any of the above types of non-Gmail accounts and you wantyour old address and transfer entirely to Gmail, you can import all email of your old Gmail account by following the steps on this Google support page. You may also want to instruct your old mail service to transmit all new messages to your Gmail address so as not to miss out on any important missives from people who have not yet learned about your move. MessagingNot surprisingly, Apple's iMessage system does not play well with non-Apple platforms. But this does not mean that it is impossible to leave; just take the right set of steps to avoid the misery of missing message. First, go to Settings on your iPhone, tap "Messages," and then activate "iMessage" at off. While you're in Settings, you'll probably want to search for the "FaceTime" option and turn it off as you're probably no longer active on that platform. Second, open Apple's "Deregister iMessage" web page and scroll down to the labeled section "Do they no longer have your iPhone?" Enter your phone number, click the link to send a confirmation code, then type the confirmation code you receive on the page. Both these passages are critical; If you don't complete them, Apple will probably intercept at least some of your incoming text messages, and you'll never know you lost them. JR Raphael/IDG Get the phone number from the iMessage system or forever wonder if Apple is stealing messages. If you want to keep all existing text messages and bring them to the new phone, an application called iSMS2droid can get the job done. The process is a bit burning and involves the manual backup of your iPhone in a computer, then find specific files and transfer them to your Android phone — but if you really need to save all your old messages, it is the best option you have. The silver lining is that once you are on Android, keeping messages synchronized and available on any device can be thoughtless. Just be sure to choose a messaging app that automatically backups and restores data from the get-go, and you will be fine as wine. FilesSo long, iCloud Drive — hi, Google Drive. The most direct way to get all data from Apple's cloud storage service and Google is to install desktop applications for both iCloud Drive and Google Drive on your Mac or Windows PC. Then, open Finder or File Explorer windows for both locations, select everything from iCloud Drive, and drag it to Google Drive. Wait for the transfer to finish, and this is all: Each of your valuable files is now available via Google Drive on Android (as well as on iOS and the web). AppsThe bad news: All the apps you have installed on your iPhone will not automatically transfer to Android, and app you paid for iOS will probably have to be purchased again. The good news: These days, most of the major productivity applications are easily available on both platforms. And once you're all set up with Android, all of your apps and app data automatically syncs with Google Play Store on your Android phone or through a web browser on any computer and search for the apps you want. If you install an app on your phone and ask you to access the first opening, make sure you use the same username or email address you used on your iPhone, so that your account data can be transferred. After you're settled, you might want to explore a little further than the apps you already know. Unlike iOS, Android allows all kinds of smart tools for customization and control of the main user interface, and some of them can improve efficiency in quite interesting ways. [Related: Android apps: The best of the best]MusicaThanks to your lucky stars, because bringing music from iOS to Android is no longer the absolute nightmare that was once. There is nothing to it if you use a streaming service such as Spotify, Pandora, Google Play Music, or even « incredibly « Apple Music; Just download the equivalent application from the Google Play Store, log in, and all your collection, the best thing is to download the equivalent application from the Google Play Store, log in, and all your collection, the best thing is to download the equivalent application from the Google Play Store, log in, and all your collection, the best thing is to download the Music Manager app based on Mac or Windows for Google Play Music. You can find and design, will not be compatible with any other music service. If you want to pay \$25 for a year of Apple's iTunes Match service, you can "change" files with versions not protected by DRM that will work anywhere. Otherwise, the only real option is to use the old way of burning the tracks on a CD (assuming that the computer still has a CD burner, of course), then put the CD back on the computer and tear the songs into a standard unlocked format. That will result in audio quality less than what you would get the purchase of songs directly from almost all music services nowadays, but that's what it is. Welcome to AndroidBene, would you take a look at this? You did it! All important information is now out of your iPhone and your newAndroid, and you're ready to start again as an Android card holder. Before we say goodbye and send you scamping away on your new adventure, let's take a moment to go over some noteworthy things as you learn your way this new wilderness world. First, the basics: No matter where you are in Android, you can always swipe down once from the top of the screen to see any pending notifications, Android makes them exceptionally easy to control â so learn the ins and outs of managing notifications, Android makes them exceptionally easy to control â so learn the ins and outs of managing notifications and swipe down a second time to see the full Quick Settings panel. And speaking of notifications, Android makes them exceptionally easy to control â so learn the ins and outs of managing notifications and swipe down a second time to see the full Quick Settings panel. Notification Panel (left) and the Quick Settings Panel (right) are never more than a strip away. (The exact appearance of these devices may vary from phone to phone.) If your device shipped with Android 10, you'll find what's sure to be a little memory management system to bypass your phone: From anywhere in the operating system, you can flick your finger up from the bottom of the screen to get back to the home screen, scroll up about an inch from the bottom of the screen and then stop opening the intercept System view and navigate through the recently used applications. You can also swipe diagonally from a lower corner of the screen to call Google Assistant, and anytime you want to move back a step in whatever you're doing, you can swipe in from the left or right edge of your phone's display. On phones with older Android versions â or those where gesture navigation is not enabled â, you'll find three buttons at the bottom of the screen providing tap-friendly ways to access those same basic features. In this arrangement, Assistant is typically accessible by pressing and holding the Home key. One more thing: You've never seen scary stories about Android security. Be aware: most of these things are excessively sensational and misleading. Malware really isn't a real-world problem on Android, and Google has its multi-layered security system in place to protect you from all sorts of threats - including the most realistic of all: a lost phone. Craving even more practical tips and foundational knowledge? You're not a tenacious monkey! Check out the following Computerworld guides to continue your Android optimization training: This article was originally published in August 2017 and most recently updated in February 2020.
